

UBIFERON - T [®]

Iron Dextran + Vitamin B12 | Fortified with Tylosin for Injection

WORKS PERFECTLY FOR YOUR PIGLETS

Triple Package Protection for your farm animals, specifically against:

- Iron Deficiency Anemia
- Mycoplasma Pneumonia
- Bacterial Enteritis

Anti-microbial protection
3 treatments in 1 injection
Optimum weight gain

UBIFERON-T

IRON DEXTRAN

Rapidly absorbed from the injection site

Elemental iron is continuously released from its dextran-complex and is used to its full extent in the synthesis of hemoglobin, to restore tissue enzymes and replenish iron stores

VITAMIN B12

An important factor in blood formation

Improves blood picture and prevents anemia

TYLOSIN

An anti-microbial agent belonging to the macrolide group, having biostatic activity

Anti-bacterial spectrum includes gram positive organisms generally susceptible to the macrolide group

Used in the prevention and treatment of vibronic scour in pigs, respiratory infection in animals, mycoplasma infection and exudative dermatitis or greasy pig disease

Maximum blood concentration is achieved one hour after administration

Dosage and Administration

By deep intramuscular injection (IM)

Piglet: 1-2mL on the 3rd day of life

Provide booster shot at 10-14 days if necessary

Calf: 4-6mL on the first week

Lamb/Kid: 2mL on the third day

Use aseptic technique

Manufactured for and Distributed by:

Withdrawal Period

Meat: 21 days

Milk: 7 days

Packaging

100mL, 10mL amber bottle

Indication

Primarily indicated for the prevention and treatment of Iron Deficiency Anemia in piglets and other livestock animals, especially when precautions against respiratory and intestinal infection have to be taken at the same time

Piglets reared under present-day intensive conditions are born with low iron reserves, and thus, their needs are not adequately supplied by natural sources. This leads to iron deficiency anemia

Iron deficiency anemia weakens the piglets' resistance to secondary infection such as scours and pneumonia

Tylosin is added to fight against these disease conditions to prevent their occurrence

Composition

Each mL contains:

Iron Dextran	100	mg
Vitamin B12	50	mcg
Tylosin	30	mg
Carriers (qs ad)	1	mL

Storage

Store at temperatures not exceeding 30°C

Precaution Administration of iron preparation in older pigs may cause condemnation and discoloration of ham at slaughter
